

Transoft Solutions Announces “Ahead of the Curve” Scholarship winner

A Texas A&M Civil Engineering PhD Candidate Wins for 2013

FOR IMMEDIATE RELEASE

July 15, 2013 – Vancouver, BC, Canada

Transoft Solutions, developers of CAD transportation engineering software, is pleased to announce Brad Brimley as the winner of the Transoft Solutions/ITE “Ahead of the Curve” scholarship for 2013. With an impressive resume to go along with strong academic achievements and a passion for transportation engineering, Brad was selected ahead of ten other candidates for the award.

The “Ahead of the Curve” scholarship is an annual \$2000 award for aspiring engineers studying in the transportation engineering field.

Brimley is a PhD student in Civil Engineering at Texas A&M University. Throughout his college education, he has attended several ITE and Transportation Research Board meetings to enhance his understanding of traffic operations and related engineering fields. His past and current research focuses on how the presence of traffic control devices affects driver attention as they approach and navigate curves.

“I feel honored to be selected as a recipient of the “Ahead of the Curve Scholarship” sponsored by Transoft Solutions,” said Brimley. “It is clear that Transoft Solutions not only provides innovative products that improve transportation engineering in a technology-driven environment, but also supports the development of future engineers embarking on careers in an ever-changing world. My involvement with ITE has given me valuable opportunities to increase my knowledge outside of the classroom and develop a professional network that will help me throughout my career.”

In choosing Brad for this year’s scholarship, Milton Carrasco, President and CEO of Transoft Solutions said, “We looked at Brad’s impressive educational results, the depth and breadth of his research and his commitment to learning outside of the school year and felt strongly that he was an excellent candidate to receive the “Ahead of the Curve” scholarship from Transoft and the ITE. He exemplifies everything we are looking for in a future engineer.”

About Transoft Solutions

For 20 years Transoft Solutions has been developing CAD-based software for engineers and architects for their civil and infrastructural design and planning needs. Transoft’s products have become the “de facto” standard of many National Road Administration, Airport Authorities and Top Design firms in over 120 countries.
