

## Transoft Solutions Introduces SIGMA

*Transoft Solutions Launches New Software for Traffic Sign Plans – Special Webcasts Set for Introduction*

### **FOR IMMEDIATE RELEASE**

**July 27, 2009 – Vancouver, BC, Canada**

Transoft Solutions, developers of industry leading software for the global engineering and architectural communities, announces the launch of SIGMA, a new traffic sign planning software solution. SIGMA has been developed for Traffic Engineers and Maintenance Engineers to design, maintain, and report, on CAD generated traffic signing as well as temporary traffic control signing plans through supported sign libraries. Shipping will begin on Thursday July 28, 2009 with a special introduction to SIGMA webcasts being conducted on July 28<sup>th</sup> and 30<sup>th</sup>.

“SIGMA is set to revolutionize the manner in which traffic engineers and maintenance operations design and manage roadway traffic signing plans,” said Michael Frost, Product Manager. “This software delivers what is needed in the AEC industry right now – a productivity enhancing, practical solution that provides substantial value.”

SIGMA gives users the ability to easily search Federal / State Standard sign libraries, GuidSIGN signs, or user-defined simple CAD drafted cell / block drawings to create placeable sign assemblies. Users can search the SIGMA sign libraries without having to know the sign’s reference number and create sign assemblies quickly and easily. Through the Create Sign Assembly tool, users can create a sign assembly that supports typical mounting types and options, multiple sign facings, as well as assembly status by using included typical sign arrangements or by dynamic arrangement.

The placement process allows the user to drag the assembly parallel to either a reference line / stationing alignment, or offset reference geometry (edge of pavement), or enter a specific distance / station. The wizard-like placement process is a set of specific steps that allows the user to proceed or go back steps to make adjustments as needed. Once a sign is placed, the Report Manager allows the user to define and save customized reports in .CSV format for importation into the user’s preferred spreadsheet application.

SIGMA comes with one library of choice at time of purchase. To provide users with maximum value and minimum costs, additional libraries are available for purchase separately so that engineers have what is needed without paying for libraries that are not required. Currently, there are 5300 US signs available in 11 libraries with 5000 signs – including signs for Canada and Australia – to be released in the near future.

To take part in the SIGMA introduction webcast, visit <https://transoftsolutionsevents.webex.com> and include your full name, email address, a daytime phone number, email address, and the company you represent. Due to limited space an invitation cannot be guaranteed.

Complete product information is available on the SIGMA website at [www.transoftsolutions.com](http://www.transoftsolutions.com). For further information on Transoft Solutions’ suite of productivity enhancing tools, training solutions, to download free software demos, or to sign up for web-based demonstrations, please visit [www.transoftsolutions.com](http://www.transoftsolutions.com).

### **About Transoft Solutions**

Established in 1991, Transoft Solutions Inc. develops the most thoroughly researched and innovative CAD-based software for the engineering and architectural design communities. As an Autodesk Developer Network Professional and Bentley Developer Network Commercial member Transoft Solutions continues to deliver software second to none. Known as a world-wide industry leader, Transoft Solutions suite of productivity enhancing solutions have become the trusted de-facto standard for over 90% of the Top 100 ENR AEC firms, 85% of North American departments of transportation, and regulatory agencies including AASHTO.
